DESCRIPTORS	Age Groups; Annual Reports; *Child Care; Child Care Centers; *Day Care Services; *Early Childhood Education; Family Day Care; *Fees; Surveys; Tables (Data)
IDENTIFIERS	Minnesota (Ramsey County)

ABSTRACT

This report describes the second annual survey of utilization of child care services (day care homes and day care centers) in Ramsey County, Minnesota. Information about fees charged is included. Data from day care homes and centers were collected by mail or telephone. The rate of utilization of child care services was determined by county, county quadrant and community. The report categorizes day care services by four county quandrants: St. Paul West, St. Paul East, Suburban West, and Suburban East. Rates of utilization are discussed for three age ranges--infant-toddler (0-30 months), preschool (two and one half to five years), and school age (five plus years)--within each of the four quadrants. Utilization rates reported are the ratios of actual enrollment to preferred capacity, as preferred capacity is said to be a more accurate indicator of actual supply than is licensed capacity. Results concerning family day care homes indicate that 24 out of 34 communities are experiencing serious shortages of infant-toddler providers, 5 out of 34 communities are experiencing serious shortages of preschool care providers, and 23 out of 34 communities are experiencing shortages of school age providers. With regard to day care centers, three communities had serious shortages of center care for preschoolers, and one community had a serious shortage of care for infant-toddlers. Final sections of the report include tables comparing the utilization of day care homes and centers and showing the data collected from each community in the survey. (CM)

CHILD CARE SERVICES IN RAMSEY COUNTY:

FEES CHARGED AND RATES OF UTILIZATION

INTRODUCTION

In December of 1976, the Child Care Council of Ramsey County implemented a system for administering a survey of utilization and fee data to the day care homes and day care centers in Ramsey County. The objective of the system was to determine by county, county quadrant, and community the rate by which child care services were being utilized. That report was published in the spring of 1977.

The present report describes the second annual survey, conducted in December of 1977. At that time, there were 644 active family day care homes and 46 active day care centers operating in the county. By mail or by phone, contact was made with each of the homes and with each of the centers. It is on these data that the following report is based.

The utilization rates reported are the ratio of actual enrollment to preferred capacity -- actual/preferred -- since preferred capacity is a more accurate indicator of actual supply than is licensed capacity. However, it is possible for utilization to exceed 100% in those cases where a home or a center was caring for a greater number of children than that which they would have preferred.

Day care services are categorized by four county quadrants in the report: St. Paul West; St. Paul East; Suburban West; and Suburban East. The boundaries of these quadrants, as well as the communitites of which they are comprised, are detailed in the attached area map. Within each area, rates of utilization are discussed for each of the three age ranges: Infant-Toddler (0-30 months), Preschool (2½-5 years), and School Age (5+ years).

Previous investigations of child care utilization, as well as the experience of day care referral workers, have determined that optimum utilization levels are less than 100%, and that such levels differ between day care homes and day care centers. ("Optimum utilization" is that point at which supply and demand are at an effective equilibrium -- when parents can still find care and providers are operating efficiently.) The optimum level of day care home utilization appears to be about 60%, whereas optimum day care center utilization is nearer to 90%. When the ratios go above these levels, it becomes significantly more difficult for parents to find the types of care they desire at the locations they desire. Within each of the following quadrant reports, therefore, communities of "over-demand" will be earmarked as areas where there is a need for additional child care services.

ST. PAUL WEST

In the St. Paul West quadrant, there were 282 active day care homes with a licensed capacity of 1076 children five or younger, and 514 children of school age. The preferred capacity of these homes was 302 infant-toddlers, 553 preschoolers, and 305 children of school age. The actual enrollment of the homes was 231 infant-toddlers, 274 preschoolers, and 221 children of school age. Based on these figures, day care home utilization rates in the St. Paul West quadrant were 76% for infant-toddlers, 50% for preschoolers, and 72% for children of school

age. The average fee charged was $30.89 weekly for full time care, and $.90 hourly for part time care. (The average fee for the county was $30.89 weekly for full time care and $.91 hourly for part time care.)

There were 28 active day care centers in the St. Paul West quadrant with a licensed capacity of 936 children. The preferred capacity of the centers was 72 infant-toddlers, 659 preschoolers, and 123 children of school age. The actual enrollment of the centers was 68 infant-toddlers, 594 preschoolers, and 80 children of school age. Center utilization rates in the St. Paul West quadrant were 94% for infant-toddlers, 90% for preschoolers, and 65% for children of school age. The average fee charged was $36.32 weekly for full time care. Part time care is generally not charged for on an hourly basis by centers, so no average hourly fee was computed. (The average fee for the county was $35.75 weekly.)

Among the 14 communities of the St. Paul West quadrant, 10 had day care home infant-toddler utilization rates above 60%, reflecting a serious udersupply of care for this age range. (Please refer to the attached tables.) Worse, 7 of the communities had critical shortages as seen in utilization rates ranging from 80% to 140% of preferred capacity.

Care of preschoolers in the day care homes of the St. Paul West quadrant was more readily available, although 3 communities still experienced utilization within the 60% to 80% range.

Care of school age children in the St. Paul West quadrant was more difficult to find; 9 of the 14 communities had more than 60% utilization, and 5 of these ranged from 84% to 133% -- a critical undersupply of services to this age range.

Among the day care centers of the St. Paul West quadrant, the most undersupplied communities were St. Anthony Park (113% of preschool care being utilized) and Summit-University (112% of infant-toddler care being utilized).

ST. PAUL EAST

In the St. Paul East quadrant, there were 157 active day care homes with a licensed capacity of 610 children five or younger, and 298 children of school age. The preferred capacity of these homes was 217 infant-toddlers, 329 preschoolers, and 203 children of school age. The actual enrollment of the homes was 142 infant-toddlers, 148 preschoolers, and 130 children of school age. Based on these figures, day care home utilization in the St. Paul East quadrant was 65% for infant-toddlers, 45% for preschoolers, and 64% for children of school age. The average fee charged was $30.30 weekly for full time care, and $.91 hourly for part time care.

There were 6 active day care centers in the St. Paul East quadrant with a licensed capacity of 245 children. The preferred capacity of the centers was 0 infant-toddlers, 213 preschoolers, and 35 children of school age. The actual enrollment of the centers was 0 infant-toddlers, 177 preschoolers, and 38 children of school age. Center utilization rates in the St. Paul East quadrant were 84% for preschoolers and 109% for children of school age. The average fee charged was $36.52 weekly for full time care.

Among the 5 communities of the St. Paul East quadrant, 3 had infant-toddler utilization rates in day care homes of more than 60%. Two of these communities were critically undersupplied, with 80% to 125% utilization of available care.

There was no shortage of available care for preschoolers in the day care homes of the St. Paul East quadrant.

Undersupply did exist for care of school age children in the day care homes of the St. Paul East quadrant; 3 out of 5 communities were operating at greater than 69% utilization, with critical shortage of care (83% utilization) existing in one community.

Among the centers in the St. Paul East quadrant, critical undersupply was evident for children of school age in Battle Creek. In that community, utilization of available care was 133%.

SUBURBAN WEST

In the Suburban West quadrant, there were 106 active day care homes with a licensed capacity of 423 children five or younger and 187 children of school age. The preferred capacity of the homes was 127 infant-toddlers, 199 preschoolers, and 114 children of school age. The actual enrollment of the homes was 101 infant-toddlers, 100 preschoolers, and 97 children of school age. Day care home utilization rates in the Suburban West quadrant were 79% for infant-toddlers, 50% for preschoolers, and 85% for children of school age. The average fee charged was $32.01 weekly for full time care, and $.94 hourly for part time care. (Statistically, $32.01 is significantly greater than the average weekly fees charged by the other three quadrants.)

There were 8 active centers in the Suburban West quadrant with a licensed capacity of 400 children. The preferred capacity of the centers was 27 infant-toddlers, 287 preschoolers, and 55 children of school age. The actual enrollment of the centers was 13 infant-toddlers, 253 preschoolers, and 39 children of school age. Center utilization rates in the Suburban West quadrant were 49% for infant-toddlers, 88% for preschoolers, and 71% for children of school age. The average fee charged was $35.39 weekly for full time care.

Among the 8 communities of the Suburban West quadrant, a significant undersupply of day care home infant-toddler care was seen in all communities. Critical shortages were seen in 3 communities, with utilization ranging from 90% to 100%.

Shortage of day care home services to preschoolers was seen in one community of the Suburban West quadrant, with 75% utilization.

School age care in day care homes was in critical undersupply in 6 of the communitites of the Suburban West quadrant, with utilization rates ranging from 80% to 125%.

Among day care centers of the Suburban West quadrant, undersupply was seen in Spring Lake Park (111%) and New Brighton (117%) for preschooler care.

SUBURBAN EAST

In the Suburban East quadrant, there were 99 active day care homes with a licensed capacity of 388 children five or younger and 190 children of school age. The preferred capacity of the homes was 114 infant-toddlers, 233 preschoolers, and 118 children of school age. The actual enrollment was 71 infant-toddlers, 131 preschoolers, and 97 children of school age. Day care home utilization rates in the Suburban East quadrant were 62% for infant-toddlers, 56% for preschoolers, and 82% for children of school age. The average fee charged was $30.63 weekly for full time care, and $.92 hourly for part time care.

There were 4 active centers in the Suburban East quadrant with a licensed capacity of 243 children. The preferred capacity of the centers was 28 infant-toddlers, 207 preschoolers, and 25 children of school age. Center utilization rates in the Suburban East quadrant were 13% for infant-toddlers, 67% for preschoolers, and 88% for school age. The average fee charged was $32.63 weekly for full time care.

Among the 6 communities of the Suburban East quadrant, serious shortages of infant-toddler care in day care homes was seen in 3 of the communities. Critical undersupply -- 100% utilization -- existed in one community.

Shortage of preschool age care was seen in the homes of one community, with 67% utilization.

School age care in the homes of the Suburban East quadrant was in shorter supply, with significant shortage in all 6 communities and critical shortage -- 80% to 125% utilization -- in 5 communities.

There was not undersupply of care in the centers of the Suburban East quadrant.

DISCUSSION

Among Ramsey County family day care homes, 24 out of 34 communities are experiencing serious to critical shortages of infant-toddler care providers; 5 of the 34 communities are experiencing serious shortages of preschooler care providers; and 23 out of 34 are experiencing serious to critical shortages of school age care providers.

Among Ramsey County day care centers, 3 communities had serious shortages of center care for preschoolers and one community had a serious shortage of care for infant-toddlers.

When comparisons were made between the utilization rates of 1976 and 1977, a dramatic increase in demand for infant-toddler care becamse obvious. There was also a significant increase in demand for care of school age children.

The sharpest increase in demand for infant-toddler care was in the St. Paul West quadrant, where utilization of available care jumped from 50% in 1976 to 76% in 1977. On a county-wide basis, utilization of available infant-toddler care increased from 53% to 72%.

The increased demand for infant-toddler care was not due only to increased enrollment. In 1977 there were fewer homes operating, and those providers who were active indicated a decreased preference for care of this age range. There were 18% more infant-toddlers being cared for in 1977, than in 1976 but there were 13% fewer slots in which to place them. Thus it is not at all surprising that Ramsey County parents experienced increased difficulty in placing infant-toddlers, or that providers were flooded with requests for this age range.

The Suburban West quadrant was the only one which "kept up" with the increased demand for infant-toddler care; this was because the average number of preferred infant -toddlers per home increased 26% in Suburban West. (County-wide the average number of preferred infant-toddlers per home decreased 4%.)

The sharpest increase in utilization of school age care was in the Suburban West quadrant, where it rose from 67% in 1976 to 85% in 1977. County-wide, utilization of available school age care increased from 66% to 74%.

For preschool age care, significant shortages do not presently exist. County-wide utilization increased from 46% in 1976 to 50% in 1977. Still, the Suburban East quadrant is becoming "crowded" even in this age range; in that quadrant, utilization rose from 46% to 56%.

Demand for schoolage care remained fairly constant - there was a 3% increase county wide. 1977's higher utilization rates for school age care were due mostly to the 9% decrease in the number of active homes in the county.

CONCLUSIONS

It is clear that there have been dramatic increases in the demand for child care services in Ramsey County over the past year. Especially critical is the need for providers who are willing to care for children in the infant-toddler age range of less-than-2½-year olds. Additional numbers of care providers in all areas, especially those which are already undersupplied, will be needed to effectively meet the trend of a growing need for child care services in Ramsey County.
